Mobile device security policy: More and more users are conducting business on mobile devices. This can be due to increases in remote workers, travel, global workforces, or just being on-the-go.

100+ critical IT policies every company needs, ready for ...

For example, every non-techie is stumped when I tell them that every single part of a web page gets saved on your hard disk (this puzzling "cache" thing) before it gets displayed on the screen. This small information explains so much: low bandwidth leads to long delays, cache errors, why the "sign out" button is important (which leads to cookies and the "transparent user" problem)...

With 1Password, you can create different vaults for personal and work accounts (or whatever else you need), sync your data across multiple devices (it's available on everything), and even store things like bank info, credit card numbers, and other things that need extra security. 1Password encrypts everything so that it's safe, and you can't even get in without a master password.

10 Mac apps you need to download right now! | iMore

The usage share of operating systems is the percentage of computing devices that run each operating system (OS) at any particular time. All such figures are necessarily estimates because data about operating system share is difficult to obtain; there are few reliable primary sources – and no agreed methodologies for its collection.
