A System Of The Chaotic

A chaotic system is a dynamical system that's highly influenced by its beginnings. A chaotic system can't be explained because it's impossible to see how all its variables interact. There are two kinds of chaotic systems: level one chaotic systems and level two chaotic systems.

Chaotic System: What It Is + Why You Can't Explain the ...

A chaotic system may have sequences of values for the evolving variable that exactly repeat themselves, giving periodic behavior starting from any point in that sequence. However, such periodic sequences are repelling rather than attracting, meaning that if the evolving variable is outside the sequence, however close, it will not enter the sequence and in fact, will diverge from it.

The classic chaotic system example is the theoretical "Butterfly Effect," in which the wings of a butterfly cause a variation in the weather hundreds of miles away. The more nuances are captured, the more chaotic a system may appear, because those exact same input conditions are not repeated the next time.

The first chaotic system is the Lorenz system , which was introduced for weather forecast. Later investigations found that there exist chaotic attractors in the chemical reaction model [2] and electrical circuit [3].

A Study on the Complexity of a New Chaotic Financial System

This paper shows that a large class of systems, introduced in [Čelikovský & Vaněček, 1994; Vaněček & Čelikovský, 1996] as the so-called generalized Lorenz system, are state-equivalent to a special canonical form that covers a broader class of chaotic systems.This canonical form, called generalized Lorenz canonical form hereafter, generalizes the one introduced and analyzed in ...

Chaotic systems do not rely on their history as complex ones do. Chaotic behavior pushes a system in equilibrium into chaotic order, which means, in other words, out of what we traditionally define as 'order'. [clarification needed] On the other hand, complex systems evolve far from equilibrium at the edge of chaos.

A chaotic dynamical system is highly sensitive to initial conditions; small perturbations at any given time yield completely different trajectories. The trajectories of a chaotic system tend to have complex and unpredictable behaviors. Many real-world phenomena are chaotic, ...

Exploring and investigating new chaotic systems is a popular topic in nonlinear science. Although numerous chaotic systems have been introduced in the literature, few of them focus on torus-chaotic system. The aim of our short work is to widen the current knowledge of torus chaos. In this paper, a new torus-chaotic system is proposed, which has one positive Lyapunov exponent, two zero Lyapunov ...

A Torus-Chaotic System and Its Pseudorandom Properties

As chaotic signal is noise-like, unpredictable and sensitive to the variation of initial conditions and structure parameters, using chaotic system to build secure communication system is feasible and reliable. In this paper, a framework of secure communication system that is constructed with chaotic system array is proposed and analyzed.

CHAOTIC | meaning in the Cambridge English Dictionary

Specifically, this system can generate infinitely many coexisting chaotic attractors and infinitely many coexisting periodic attractors in the following three cases: (i) no equilibria, (ii) only infinitely many nonhyperbolic double-zero equilibria, and (iii) both infinitely many hyperbolic saddles and nonhyperbolic pure-imaginary equilibria.
