Anatomy and Physiology - Unit 5:

Muscular System

The musculoskeletal system consists of bones of the skeleton, the joints and the skeletal muscles. It provides form, support, stability, and movement to the body.

The musculoskeletal system's functions include supporting the body, allowing motion, and protecting vital organs.

Muscular System

system anatomy and
physiology The main
types of muscle tissue
are: skeletal, cardiac
and smooth muscles.

Skeletal muscles can
be moved voluntarily
and are important for
maintaining body
temperature, by
generating heat. The
cardiac muscle is
present only in the
heart and can contract
without neural
stimulation.
