1.2 Method A is designed to determine the relative pitting resistance of stainless steels and nickel-base, chromium-bearing alloys, whereas Method B can be used for determining both the pitting and crevice corrosion resistance of these alloys. Methods C, D, E and F allow for a ranking of alloys by minimum (critical) temperature to cause initiation of pitting corrosion and crevice corrosion ...

1 These test methods are under the jurisdiction of ASTM Committee G01 on Corrosion of Metals, and are the direct responsibility of Subcommittee G01.05 on Laboratory Corrosion Tests. Current edition approved May 10, 2003. Published July 2003. Originally approved in 1976. Last previous edition approved in 2000 as G 48 - 00.

### **Standard Test Methods for Pitting and Crevice Corrosion ...**

ASTM G48 method A suggests that 72hrs is a reasonable test period. All the specs that we have previously worked to have a test period of only 24hrs (Norsok, Shell, ExxonMobil etc) Does anyone know of a spec that insists on a 72hr test period? We have a client who has an ongoing internal debate on whether to change their data sheets.
