The third step requires creating a weighted average of land and ocean values for coastal grid boxes, the weights reflecting the relative proportions of land and ocean area in each box (which is a rational and effective approach for the most part, but on occasion a long record from an island station is downweighted significantly if most of the grid box is ocean).

48 that decadal SST anomalies are not forced by local atmospheric forcing, and thus the ocean 49 must play an active role in setting SST on decadal timescales. Kushnir (1994) suggests 50 that variability of the AMOC is a likely mechanism for creating the observed decadal SST 51 anomalies. 52 The hypothesis that the AMOC may play a role in climate variability has prompted

32 1. Introduction 33 Changes over the past two decades in upper-ocean temperatures in the Indian Ocean 34 have recently received increasing attention (e.g., Vialard 2015). The Indian Ocean 100{35 300m depth layer has warmed signi cantly since 2003 (Nieves et al. 2015). Rapid increases 36 are also seen in the top 700m Indian Ocean heat content since the early 2000s (Lee et al.
