under inequality constraint in linear model with spherically symmetric disturbance. [43] proposes an extended MaxT test and gets the power improvement. However, all these existing results are for low dimensional models. In terms of statistical inference, our work is most related to [47], where the authors establish inference for high ...

Constrained Statistical Inference for Categorical Data

Statistical inference in models defined by moment inequalities is a frequently encountered topic in econometrics. Examples of applications include games of entry with multiple equilibria (e.g., Ciliberto and Tamer, 2009), single/multiple agent optimization problems (e.g., Pakes et al., 2015), censored and missing data

Constrained statistical inference (CSI) has a long history in the statistical literature. A famous work is the classical monograph by Barlow et al. (1972), which summarized the development of order CSI in the 1950s and 1960s. Robertson et al. captured the developments of CSI in the 1970s to early 1980s and Silvapulle and Sen present the state-of-the-art with respect to CSI.
