Cryptography and Network Security. Cryptography historically dealt with the construction and analysis of protocols that would prevent any third parties from reading a private communication between two parties. In the digital age, cryptography has evolved to address the encryption and decryption of private communications through the internet and computer systems, a branch of cyber and network security, in a manner far more complex than anything the world of cryptography had seen before the ...

Cryptography is just one way towards security. It can solve some issues of security but not all of them. Careful coding for instance has nothing to do with cryptography. Appropriate memory allocation is not correlated with crypto but it is an aspect of security.

Cryptography can ensure confidentiality, integrity, secure computations etc at some level.
