The terms center lathe, engine lathe, and bench lathe all refer to a basic type of lathe that may be considered the archetypical class of metalworking lathe most often used by the general machinist or machining hobbyist. The name bench lathe implies a version of this class small enough to be mounted on a workbench (but still full-featured, and larger than mini-lathes or micro-lathes).

The Engine Lathe is very precise, easy to operate and has high safety standards. However, these lathes are not good for repetitive production as they do not have any additional integral features for that type of job. They are better used for individual part production or even parts modification. Engine Lathes are primarily used to cut metal.
