### Genetics And Human Behaviour Nuffield

Genetics and human behaviour: the ethical context. Research is exploring how genes and the environment influence behavioural traits such as aggression, anxiety, intelligence and sexual orientation. This report addresses concerns over how this information could be used to try to predict, change or select such traits.

the study of the genetics of variation within the normal range of behaviour characteristics. The subject of this Report is human behaviour within the normal range, as opposed to traits that are defined as illnesses or diseases. An important preliminary question is whether it is actually feasible to talk about a 'normal range' of behavioural traits.

In this (Nuffield Council on Bioethics 2002), the third in its series on ethics and related issues in genetics (see also Nuffield Council on Bioethics 1993 and Nuffield Council on Bioethics 1998), the Nuffield Council has focused on four 'normal' behaviors: intelligence, personality, antisocial behavior and sexual orientation. This is a narrow range of behaviors and one where their discussion of the potential impact of predictive genetic testing is probably inappropriate.
