The Buick V6, popularly referred to as the 3800, originally 198 cu in (3.2 L) and initially marketed as Fireball at its introduction in 1962, was a large V6 engine used by General Motors. The block is made of cast iron and all use two-valve-per-cylinder iron heads, actuated by pushrods. The engine, originally designed and manufactured in the United States, was also produced in later versions in ...

### **Buick V6 engine - Wikipedia**

Production of the renowned 3800 V6 engine was officially ended in August 2008, nearly 10 years beyond the automaker's original plan to cease 3800 engine production in 1999. That's quite a tribute to any pushrod motor, let alone one that started in life as a rough-running, odd-firing V6 in the '60s.

A top swap motor has higher compression giving it about 5% more power at the same mod level as its original SC cousin. The SC cannot be bolted on to the L36/L26 heads because of the engine differences stated above. It can be less costly than a motor swap, and you get to change many engine gaskets, possibly ones that need to be replaced

A-Body.net - 1982-1996 GM A-Body Forum. I'd love to know how the 3800 does on gas mileage compared to the 3100. The original EPA ratings for a 1994 3.1L Ciera Cruiser (or sedan) were 19 city 29 highway, just like a 1995 3.8L LeSabre, so the "modern" ratings of 17 city and 26 highway 20 combined are also the same.
