ICP sensors The ICP sensor reads the pressure from the engine's high pressure oil system. The Ford Power race, Navistar International and the Caterpillar engine use this type of sensors. The engine ECM uses this information to order the correct signal to the fuel injectors that will measure the delivery of fuel to the engine.

The internal cir- cuitry in the sensor causes a variation in the pulse width in the frequency, depending on the position of the accelerator pedal. The output signal from the sensor to the ECM is referred to as the Duty Cycle or Pulse Width Modulation, and is expressed as a percentage between 3 and 100%.
