Special Senses: Hearing (Audition) ... Hearing is the transduction of sound waves into a neural signal that relies on the structures of the ear. The outwardly visible structure that is often referred to as the ear is more correctly referred to as the outer ear (external ear), or the auricle.

Special Senses: Hearing (Audition) and Balance | Anatomy ...

The functions of the five special senses include: Vision. Sight or vision is the capability of the eye(s) to focus and detect images of visible light on photoreceptors in the retina of each eye that generates electrical nerve impulses for varying colors, hues, and brightness. Hearing. Hearing or audition is the sense of sound perception. Taste.

Human Anatomy & Physiology Laboratory Manual, Main Version ...

Special and General Senses. The human body has two basic types of senses, called special senses and general senses. Special senses have specialized sense organs that gather sensory information and change it into nerve impulses. Special senses include the vision for which the eyes are the specialized sense organs, hearing (ears), balance (ears), taste (tongue), and smell (nasal passages).
