I switch to manual focus and then aim at the target, lock in my focus and then I forget about it. I am going to be pressing the shutter button when birds enter the plane of focus. Since birds move quickly and change direction quickly, and since there is always a potential for the background to confuse the autofocus in those fast-moving situations, I prefer

Half way the repair the lens came apart further than I indented, but fortunately that was fixed by unplugging the ribbon cable from the Auto/Manual focus switch and unscrewing it, fitting the plastic ring again, and plugging/screwing the button back. In short some freighting moments, but I got it in the end :D.
