Reproduction Study Resources - Course Hero

Reproduction is a process of making new organisms from one or more parent organisms. It happens in two ways, sexually and asexually. Sexual reproduction involves the joining of egg and sperm, and results in unique* offspring. Asexual reproduction is the production of offspring from a single parent.

Piniarski, E / reproduction study guide

The cell cycle is generally divided into two phases: interphase and mitosis. During interphase, the cell spends most of its time performing the functions that make it unique. Mitosis is the phase of the cell cycle during which the cell divides into two daughter cells.. Interphase. The interphase stage of the cell cycle includes three distinctive parts: the G₁ phase, the S phase, and the G₂ phase.
