Climate change is quickly becoming the biggest threat to the long-term survival of America's wildlife. No longer is climate change something only facing future generations—changes to our climate are being documented all across the planet today, and people, animals, and plants are already feeling the heat.

### **Climate Change | National Wildlife Federation**

The term "global warming" denotes an aspect of climate change characterized by a rapid increase in the Earth's average surface temperature over the past century due mainly to the burning of fossil fuels that increase greenhouse gases (). A naturally occurring greenhouse warming is primarily exerted by water vapor, and this plays a crucial role in keeping the Earth's surface temperature ...
