Many of the sciences also use quadratic equations, including astronomers, chemists and physicists. Additionally, agriculturists use these equations to produce bigger fields with the materials they are given, as well. Several people don't think of managers and clerical staff requiring quadratic equations, but in some cases, they must.

Even though the mathematical induction has two steps, we can think of this proof as a sequence of proofs: When $n = 1$, we prove the equation explicitly in Step 1; in step 2, we prove the equation is true for $n = k + 1$ if it is true when $n = k$. Because the equation is true for $n = 1$, we know it is true for $n = 2$;
