distribution is an air distribution strategy for providing ventilation and space conditioning in buildings as part of the design of a HVAC system. UFAD systems use an underfloor supply plenum located between the structural concrete slab and a raised floor system to supply conditioned air through floor diffusers directly into the occupied zone of the building.

Underfloor Hvac Design Guide

The use of underfloor air distribution systems (UFAD) is increasing as a solution to space conditioning concerns. As the use of these systems increases, so does the importance of initial design and effective operation and maintenance of these systems after installation. This set includes both UFAD Guide and The O&M Guide for complete guidance.
